**CAUTION!!!**

These instructions contain information about gauges of different sizes. **You must determine the size of your gauge before cutting any holes!**

**1 BEGIN HERE**

**BEGIN HERE**

**CAUTION:** Read these instructions thoroughly before making installation. Do not deviate from assembly or wiring instructions. Always disconnect battery ground before making any electrical connections. If in doubt, please contact your dealer or VDO Instruments at (540) 665-2428.

**IMPORTANT:** Mounting dimensions vary for different gauges. Please be certain to follow the instructions for your specific gauge as described below.

**Voltmeter Installation:**

1. Select the location where you will mount the gauge, and mark a center point.

2. Cut a 2¾" (52 mm) diameter hole for all gauges except Pro Cockpit, which requires a 2¾" (66 mm) hole. If the gauge is too snug, use a file to slightly enlarge the opening. (Diagram A)

3. Insert the instrument and secure it with either the VDO Spin-Lok™ clamp or mounting bracket. The Spin-Lok™ clamp can be reversed to accommodate various panel thicknesses. (Diagram B)

DO NOT OVERTIGHTEN.

**Wiring the Voltmeter:**

1. Run wires from the instrument location through the firewall to:
   a) a positive (+), switched power source (i.e: after the fuse box and the ignition switch, or any other switch).
This positive power source **MUST BE SWITCHED**, and must be protected with a fuse); 

b) the light switch (also after the fuse in the fuse box); and 

c) a good ground location.

2. Connect the positive (+) and negative [ground] (–) wires as shown in Diagram C. 

3. Connect the appropriate positive (+) and ground (negative [–]) wires to the terminals on the Voltmeter’s lamp socket. Be sure that the ground wire from the lamp socket uses its own ground connection (separate from the one used by the gauge terminal ground), as shown in Diagram C.

At this point, the installation and wiring of your new VDO Voltmeter is complete. Turn on the ignition and the lights in the car and check to see that the instrument and light are working properly. If they aren’t, re-check your wiring, referring to the wiring description in Diagram C.
